Application/Control Number: 10/003,574

Art Unit: 1754

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action. The request filed on 2/2/04 for Continued examination (RCE) based on parent Application No. 10/003574 is acceptable and a has been established. An action on the RCE follows.

Claims 1-12, 14, 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- A) It is unclear exactly what the process is; the chemical reactions should be set forth as to the exact product made. Claim 1 is confusing because it recites green liquor in the initial step, yet green liquor is not made until later.
- B) In claim 10, 'a production curve' is unclear as to what it refers. It appears by virtue opf the diagram, that no matter how the process is run, the same result will occur. However, this is contrary to the tone and tenor of the rest of the specification.
- C) In claim 7, 'dynamic' is unclear. How does it evolve or change? According to the specification, it is the process that changes not the model.
- D) The claims as a whole are unclear as to how the 'model' (computer control program?) works and how the values are calculated.

Claims 1-12, 14, 15 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

There is no disclosure of how to calculate the 'coefficient' (claim 11), how to decide when the model/target is wrong. It appears in claim 1 that 'calculating', rather

Application/Control Number: 10/003,574

Art Unit: 1754

than 'controlling' is meant. Claim 1 does not actually require exerting control or

changing any characteristics of the process.

Claims 1-12, 14, 15 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable

Page 3

over Baines taken with Mosow.

This is the same rejection previously made, incorporated herein by reference.

Applicant's arguments filed 2/2/04 have been fully considered but they are not

persuasive.

The arguments concerning the '112 rejections indicate that computer control is well

known. It is suggested that a picture comparing the flow diagram of the present process

showing what reagents are added and what reactions occur, to that of Baines be made.

with indication as to where in the process sampling occurs and where control is exerted.

Essentially, the claimed reactions are old and known and the applicant has selected a

slightly different way of automating and controlling a process. However, this is deemed

within the purview of the artisan in view of the teachings that any variable(s) can be

monitored and control exerted according to the monitored parameter(s). Clearly, both

the claims and the prior art seek to efficiently produce the product.

Any inquiry concerning this communication should be directed to examiner

Hendrickson at telephone number (571) 272-1351.
